TASK

To build a Personal Profile Portfolio

Task Description:

The task is to build a completely responsive single page portfolio website that consists of the following details and sections:

Introduction Section:

A landing section with a proper introduction including (name, profile, photograph, etc)

About:

An about section with general information of your profile that includes all the details regarding your achievements, future goals, societies you are part of etc.

Skills:

A Skills section that describes all the knowledge and technical skills that you have and their overall rating on a scale of your choice (Eg:- 4 out of 5) and proper animations.

Projects:

A project section with proper description and link of your projects that you have completed till now. (Link of GitHub or hosted anywhere else)

Instructions :

1. The site must have each and every possible information of yours so that knowledge, experience, and expertise of yours can be judged properly,
2. You can use any library or framework in your code.
3. Usage of templates directly from the internet is prohibited.
4. You can refer to the internet for adding different elements to the web page.

Task Submission:

Host the webpage on Github or anywhere else and share a live link of it. Submit your task to register yourself before the deadline.
